

Interactive comment on “Stabilising Large Grains in Aggrading Steep Channels” by William H. Booker and Brett C. Eaton

Jens Turowski (Editor)

turowski@gfz-potsdam.de

Received and published: 16 July 2019

Dear authors,

we have been fortunate to receive three thorough and detailed reviews. The reviewers give a host of detailed comments and suggestions on all parts of the manuscript. They agree that this is an interesting and worthwhile study; however, they also agree that the presentation quality can be improved. I agree with the assessment and ask you to edit the paper to improve its framing, to sharpen the message and better organise the material around the central line of argument. In particular, please make sure that methods, results and interpretations are clearly separated and presented in their respective section.

C1

I am looking forward to receiving your revised manuscript. Please include a rebuttal letter with replies to all of the reviewers' comments.

With best wishes, Jens Turowski
